

# Hands-on with D2RQ

---

Author: Mingjie Ye

## 0. Environment

---

- System: MacOS
- MySQL 8.0.15
- D2RQ 0.8.1
- Java 1.8

## 1. Introduction

---

The topic I chose in the Seminar 1 is about RDB2RDF and query a non-RDF database using SPARQL. My hands-on work is based on D2RQ which is a platform for accessing relational database as RDF ways. In this work, I create a relational database in MySQL and use SQL to SELECT some data. Then we run D2R server from the command line to execute the D2RQ mapping. We could access querying in HTML browsers or command line. The results are clearly showed in the page.

## 2. Installation

---

D2RQ is available in its website <http://d2rq.org/#compatibility>

D2RQ supports many relational databases:

- Oracle
- MySQL
- PostgreSQL
- SQL Server
- HSQLDB
- Interbase/Firebird

Here, I chose MySQL as the relational database. The installation of MySQL is easy with the document of MySQL tutorial <https://dev.mysql.com/downloads/installer/>.

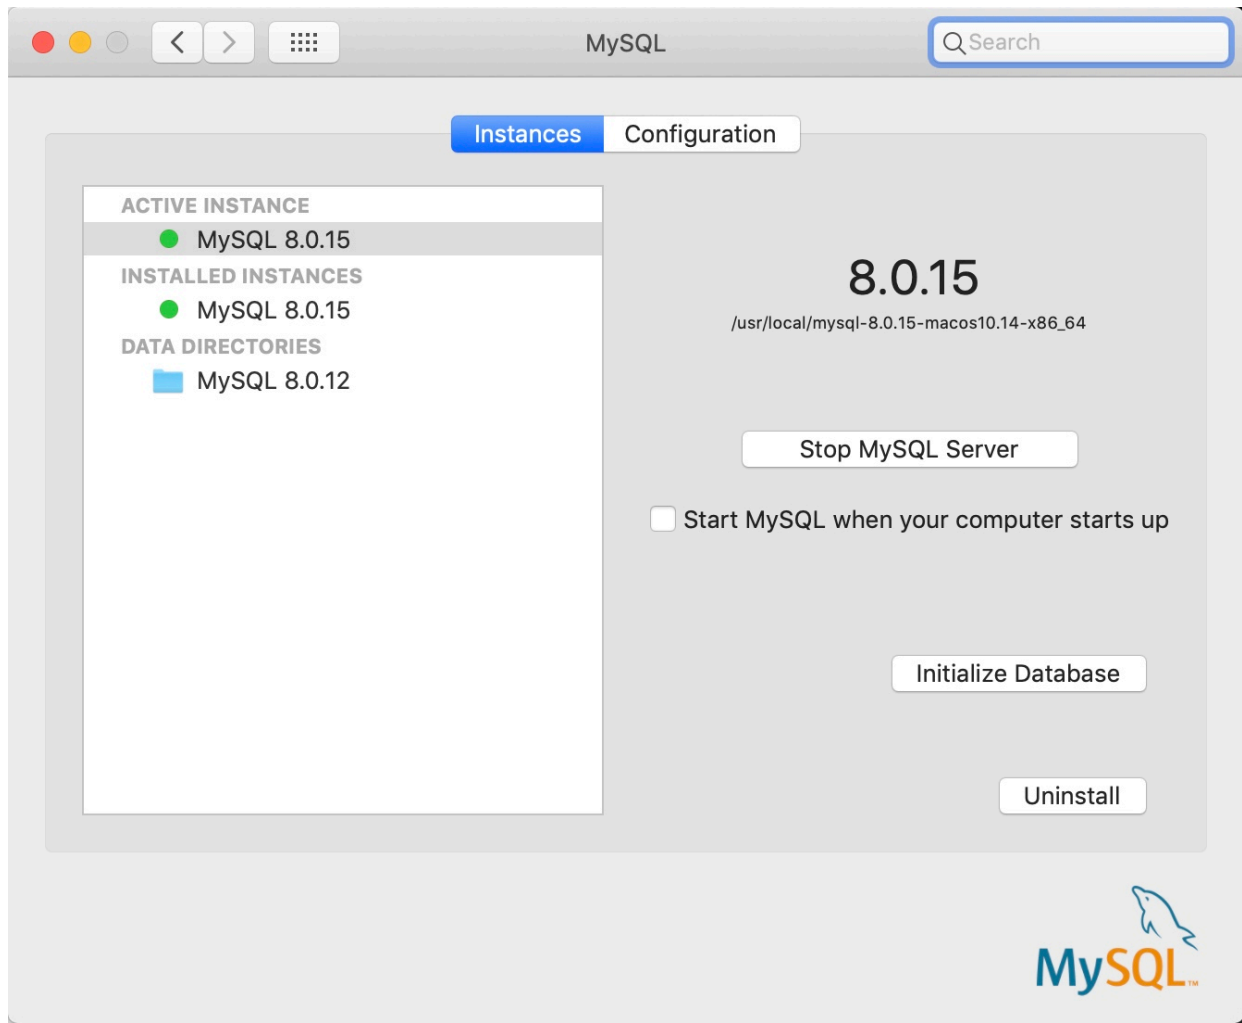

In order to access database, we need JDBC driver which is a software component enabling a Java application to interact with a database. We could download MySQL JDBC driver named Connector/J from the official website <https://dev.mysql.com/downloads/connector/j/>. Then place the **mysql-connector-java-8.0.15.jar** file into '**/d2r-server-0.7/lib/**'

## 3. Running

---

### 3.1 Run MySQL

First, we open mysql in Preference.

Here, I use root as my username and 12345678 as my password and use the database from the ISWC 2002 conference [available here](#) as an example. I add some lines in this sql file in order to create a database "iswc" in mysql first and use iswc. So the sql file here is slightly different.

Then in command line: `mysql -u root -p < iswc-mysql.sql`

```
[Mingjies-MacBook-Pro:d2rq-0.8.1 mingjie$ mysql -u root -p < iswc-mysql.sql
```

```
[Enter password:
```

```
Mingjies-MacBook-Pro:d2rq-0.8.1 mingjie$ █
```

See our databases, tables and execute a simple SELECT in MySQL.

```
[mysql> show databases;
+-----+
| Database |
+-----+
| information_schema |
| iswc |
| mysql |
| performance_schema |
| sys |
+-----+
5 rows in set (0.00 sec)
```

```
[mysql> use iswc;
Reading table information for completion of table and column names
You can turn off this feature to get a quicker startup with -A
```

Database changed

```
[mysql> show tables;
+-----+
| Tables_in_iswc |
+-----+
| conferences |
| organizations |
| papers |
| persons |
| rel_paper_topic |
| rel_person_organization |
| rel_person_paper |
| rel_person_topic |
| topics |
+-----+
9 rows in set (0.00 sec)
```

```
[mysql> select FirstName, LastName, email from persons;
```

FirstName	LastName	email
Yolanda	Gil	gil@isi.edu
Varun	Ratnakar	varunr@isi.edu
Jim	Blythe	blythe@isi.edu
Andreas	Eberhart	eberhart@i-u.de
Borys	Omelayenko	borys@cs.vu.nl
Andy	Seaborne	andy.seaborne@hpl.hp.com
Alberto	Reggiori	areggiori@webweaving.org
Sonia	Bergamaschi	bergamaschi.sonia@unimo.it
Francesco	Guerra	guerra.francesco@unimo.it
Christian	Bizer	chris@bizer.de

```
10 rows in set (0.00 sec)
```

The result is showed in command line.

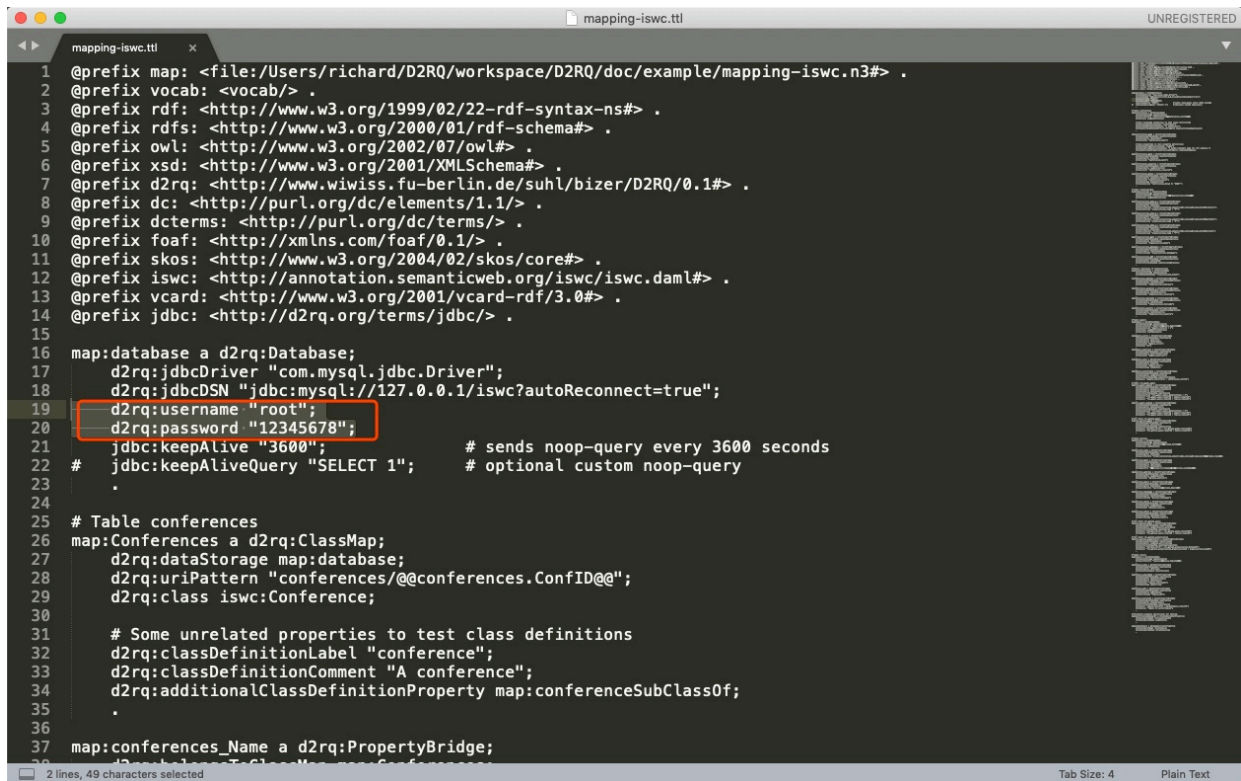

## 3.2 D2RQ

Now we are going to mapping this relational database into RDF way and query by SPARQL language.

First, we have to generate a mapping file for our database schema using the [generate-mapping](#) tool. It's like

```
generate-mapping -o mapping.ttl -d driver.class.name
-u db-user -p db-password jdbc:url:...
```

Here, we use this [mapping file](#). Pay attention to the username and password in the file. You need change them to yours before mapping.

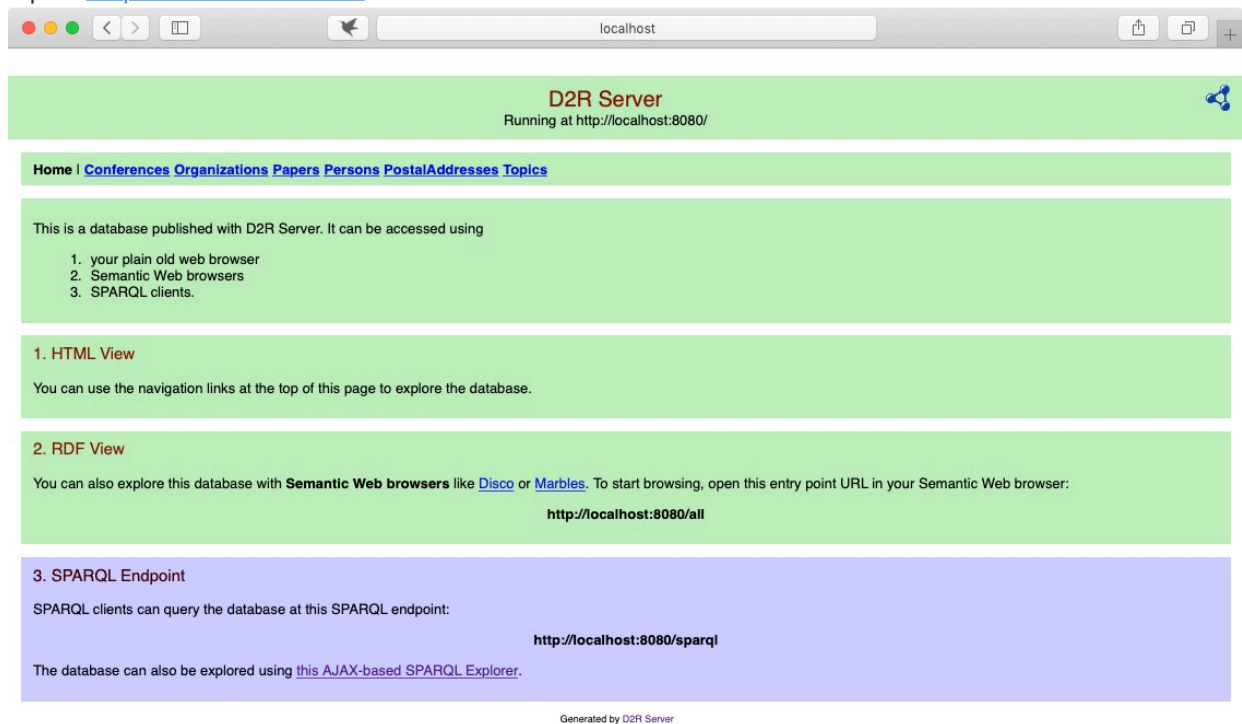

```
1 @prefix map: <file:/Users/richard/D2RQ/workspace/D2RQ/doc/example/mapping-iswc.n3#> .
2 @prefix vocab: <vocab/> .
3 @prefix rdf: <http://www.w3.org/1999/02/22-rdf-syntax-ns#> .
4 @prefix rdfs: <http://www.w3.org/2000/01/rdf-schema#> .
5 @prefix owl: <http://www.w3.org/2002/07/owl#> .
6 @prefix xsd: <http://www.w3.org/2001/XMLSchema#> .
7 @prefix d2rq: <http://www.wiwiwss.fu-berlin.de/suhl/bizer/D2RQ/0.1#> .
8 @prefix dc: <http://purl.org/dc/elements/1.1/> .
9 @prefix dcterms: <http://purl.org/dc/terms/> .
10 @prefix foaf: <http://xmlns.com/foaf/0.1/> .
11 @prefix skos: <http://www.w3.org/2004/02/skos/core#> .
12 @prefix iswc: <http://annotation.semanticweb.org/iswc/iswc.daml#> .
13 @prefix vcard: <http://www.w3.org/2001/vcard-rdf/3.0#> .
14 @prefix jdbc: <http://d2rq.org/terms/jdbc/> .
15
16 map:database a d2rq:Database;
17   d2rq:jdbcDriver "com.mysql.jdbc.Driver";
18   d2rq:jdbcDSN "jdbc:mysql://127.0.0.1/iswc?autoReconnect=true";
19   d2rq:username "root";
20   d2rq:password "12345678";
21   jdbc:keepAlive "3600"; # sends noop-query every 3600 seconds
22   # jdbc:keepAliveQuery "SELECT 1"; # optional custom noop-query
23
24
25 # Table conferences
26 map:Conferences a d2rq:ClassMap;
27   d2rq:dataStorage map:database;
28   d2rq:uriPattern "conferences/@@conferences.ConfID@@";
29   d2rq:class iswc:Conference;
30
31 # Some unrelated properties to test class definitions
32 d2rq:classDefinitionLabel "conference";
33 d2rq:classDefinitionComment "A conference";
34 d2rq:additionalClassDefinitionProperty map:conferenceSubClass0f;
35
36
37 map:conferences_Name a d2rq:PropertyBridge;
```

Then, run it by using

```
./d2r-server -p 8080 mapping-iswc.ttl
```

```
Mingjies-MacBook-Pro:d2rq-0.8.1 mingjie$ ./d2r-server -p 8080 mapping-iswc.ttl
Loading class 'com.mysql.jdbc.Driver'. This is deprecated. The new driver class is 'com.
mysql.cj.jdbc.Driver'. The driver is automatically registered via the SPI and manual loa
ding of the driver class is generally unnecessary.
02:16:27 INFO  JettyLauncher          :: [[[ Server started at http://localhost:8080/ ]]]
```

Open <http://localhost:8080/> in browsers.

The screenshot shows a web browser window with the address bar set to 'localhost'. The page title is 'D2R Server' and it says 'Running at http://localhost:8080/'. Below the title is a navigation bar with links: Home, Conferences, Organizations, Papers, Persons, PostalAddresses, Topics. The main content area has a green background and contains the following text:

This is a database published with D2R Server. It can be accessed using

1. your plain old web browser
2. Semantic Web browsers
3. SPARQL clients.

1. HTML View

You can use the navigation links at the top of this page to explore the database.

2. RDF View

You can also explore this database with **Semantic Web browsers** like [Disco](#) or [Marbles](#). To start browsing, open this entry point URL in your Semantic Web browser:

**<http://localhost:8080/all>**

3. SPARQL Endpoint

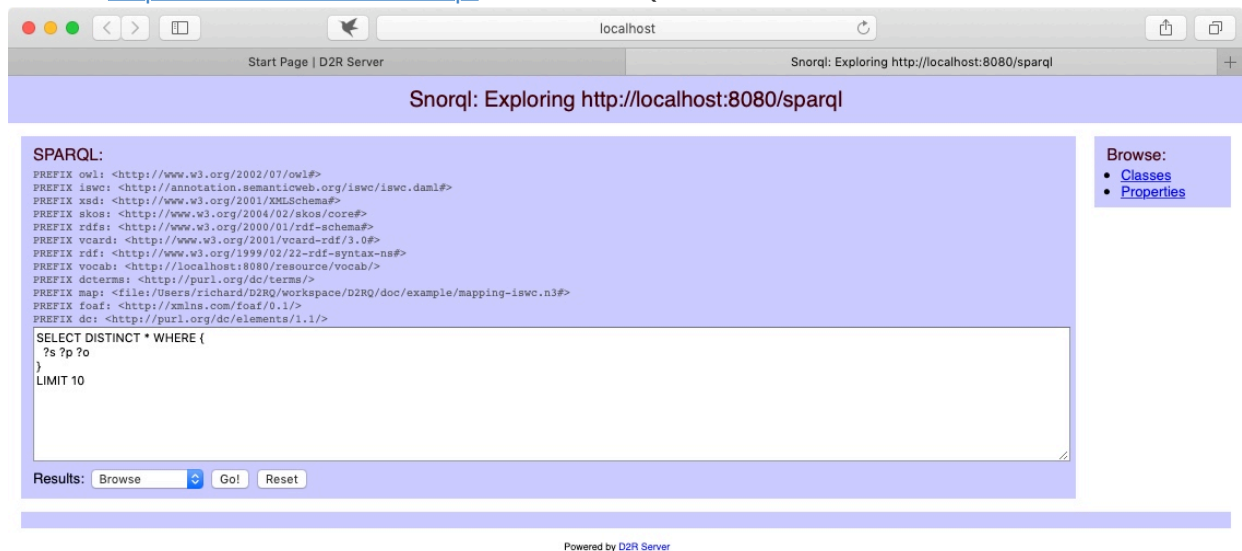

SPARQL clients can query the database at this SPARQL endpoint:

**<http://localhost:8080/sparql>**

The database can also be explored using [this AJAX-based SPARQL Explorer](#).

Generated by D2R Server

Turn to <http://localhost:8080/snorql/> to use SPARQL.

The screenshot shows the 'Snorql: Exploring http://localhost:8080/sparql' interface. It has a purple header bar with the title 'Snorql: Exploring http://localhost:8080/sparql'. Below the header is a text area for entering SPARQL queries. The text area contains the following query:

```
PREFIX owl: <http://www.w3.org/2002/07/owl#>
PREFIX iswc: <http://annotation.semanticweb.org/iswc/iswc.daml#>
PREFIX xsd: <http://www.w3.org/2001/XMLSchema#>
PREFIX skos: <http://www.w3.org/2004/02/skos/core#>
PREFIX rdfs: <http://www.w3.org/2000/01/rdf-schema#>
PREFIX vcard: <http://www.w3.org/2001/vcard-rdf/3.0#>
PREFIX rdf: <http://www.w3.org/1999/02/22-rdf-syntax-ns#>
PREFIX vocab: <http://localhost:8080/resource/vocab/>
PREFIX dotrans: <http://purl.org/dc/terms/>
PREFIX map: <file:/Users/richard/D2RQ/workspace/D2RQ/doc/example/mapping-iswc.n3#>
PREFIX foaf: <http://xmlns.com/foaf/0.1/>
PREFIX dc: <http://purl.org/dc/elements/1.1/>

SELECT DISTINCT * WHERE {
  ?s ?p ?o
}
LIMIT 10
```

Below the text area are buttons for 'Results', 'Browse', 'Go!', and 'Reset'. On the right side, there is a 'Browse:' section with links for 'Classes' and 'Properties'. At the bottom, it says 'Powered by D2R Server'.

In the 3.1, I use `select FirstName, LastName, email from persons;` in MySQL and get some results. Here, I use SPARQL to achieve the same query and get the same results.

localhost

Start Page | D2R Server

Snorql: Exploring <http://localhost:8080/sparql>

**SPARQL:**

```

PREFIX owl: <http://www.w3.org/2002/07/owl#>
PREFIX iswc: <http://annotation.semanticweb.org/iswc/iswc.daml#>
PREFIX xsd: <http://www.w3.org/2001/XMLSchema#>
PREFIX skos: <http://www.w3.org/2004/02/skos/core#>
PREFIX rdfs: <http://www.w3.org/2000/01/rdf-schema#>
PREFIX vcard: <http://www.w3.org/2001/vcard-rdf/3.0#>

"Christian Bizer"	<mailto:chris@bizer.de> <a href="#">✉</a>

Powered by [D2R Server](#)

**Browse:**

- [Classes](#)
- [Properties](#)

The results could also be saved as JSON, XML or XML+XSLT. For example, the JSON form of the query in this case is:

```

{
  "head": {
    "vars": [ "name" , "email" ]
  } ,
  "results": {
    "bindings": [
      {
        "name": { "type": "literal" , "value": "Yolanda Gil" } ,
        "email": { "type": "uri" , "value": "mailto:gil@isi.edu" }
      } ,
      {
        "name": { "type": "literal" , "value": "Varun Ratnakar" } ,
        "email": { "type": "uri" , "value": "mailto:varunr@isi.edu" }
      } ,
      {
        "name": { "type": "literal" , "value": "Jim Blythe" } ,
        "email": { "type": "uri" , "value": "mailto:blythe@isi.edu" }
      } ,
      {
        "name": { "type": "literal" , "value": "Andreas Eberhart" } ,
        "email": { "type": "uri" , "value": "mailto:eberhart@i-u.de" }
      } ,
      {
        "name": { "type": "literal" , "value": "Borys Omelayenko" } ,

```

```

    "email": { "type": "uri" , "value": "mailto:borys@cs.vu.nl" }
  } ,
  {
    "name": { "type": "literal" , "value": "Andy Seaborne" } ,
    "email": { "type": "uri" , "value":
"mailto:andy.seaborne@hpl.hp.com" }
  } ,
  {
    "name": { "type": "literal" , "value": "Alberto Reggiori" } ,
    "email": { "type": "uri" , "value":
"mailto:areggiori@webweaving.org" }
  } ,
  {
    "name": { "type": "literal" , "value": "Sonia Bergamaschi" } ,
    "email": { "type": "uri" , "value":
"mailto:bergamaschi.sonia@unimo.it" }
  } ,
  {
    "name": { "type": "literal" , "value": "Francesco Guerra" } ,
    "email": { "type": "uri" , "value":
"mailto:guerra.francesco@unimo.it" }
  } ,
  {
    "name": { "type": "literal" , "value": "Christian Bizer" } ,
    "email": { "type": "uri" , "value": "mailto:chris@bizer.de" }
  }
]
}
}

```

Another example of query using SPARQL is "Select people who wrote papers on the topic 'Semantic Web':"

```

SELECT DISTINCT ?personName ?paperTitle WHERE {
  ?paper dc:creator ?person .
  ?person foaf:name ?personName .
  ?paper dc:title ?paperTitle .
  ?paper skos:subject ?topic .
  ?topic rdfs:label ?topicName .
  FILTER (?topicName = "Semantic Web")
}

```

The result is showed as the figure below.

The screenshot shows a web browser window with the address bar set to 'localhost'. The page title is 'Snorql: Exploring http://localhost:8080/sparql'. The main content area is titled 'SPARQL:' and contains a list of prefixes and a query. The query is: `SELECT DISTINCT ?personName ?paperTitle WHERE { ?paper dc:creator ?person . ?person foaf:name ?personName . ?paper dc:title ?paperTitle . ?paper skos:subject ?topic . ?topic rdfs:label ?topicName . FILTER (?topicName = "Semantic Web") }`. Below the query is a 'Results:' section with a 'Browse' button and 'Go!' and 'Reset' buttons. The 'SPARQL results:' section shows a table with two columns: 'personName' and 'paperTitle'. The table contains three rows of data. To the right of the query area is a 'Browse:' section with links for 'Classes' and 'Properties'. At the bottom of the page, it says 'Powered by D2R Server'.

SPARQL:

```
PREFIX owl: <http://www.w3.org/2002/07/owl#>
PREFIX iswc: <http://annotation.semanticweb.org/iswc/iswc.daml#>
PREFIX xsd: <http://www.w3.org/2001/XMLSchema#>
PREFIX skos: <http://www.w3.org/2004/02/skos/core#>
PREFIX rdfs: <http://www.w3.org/2000/01/rdf-schema#>
PREFIX vcard: <http://www.w3.org/2001/vcard-rdf/3.0#>
PREFIX rdf: <http://www.w3.org/1999/02/22-rdf-syntax-ns#>
PREFIX vocab: <http://localhost:8080/resource/vocab/>
PREFIX dcterms: <http://purl.org/dc/terms/>
PREFIX map: <file:/Users/richard/D2RQ/workspace/D2RQ/doc/example/mapping-iswc.n3#>
PREFIX foaf: <http://xmlns.com/foaf/0.1/>
PREFIX dc: <http://purl.org/dc/elements/1.1/>

SELECT DISTINCT ?personName ?paperTitle WHERE {
  ?paper dc:creator ?person .
  ?person foaf:name ?personName .
  ?paper dc:title ?paperTitle .
  ?paper skos:subject ?topic .
  ?topic rdfs:label ?topicName .
  FILTER (?topicName = "Semantic Web")
}
```

Results:

SPARQL results:

personName	paperTitle
"Yolanda Gil"	"Trusting Information Sources One Citizen at a Time"@en
"Varun Ratnakar"	"Trusting Information Sources One Citizen at a Time"@en
"Andreas Eberhart"	"Automatic Generation of Java/SQL based Inference Engines from RDF Schema and RuleML"@en

Powered by [D2R Server](#)

Besides d2r-server, we could also use d2r-query to run a SPARQL query from the command line:

```
d2r-query mapping.ttl "SELECT * { ?s ?p ?o } LIMIT 10"
```

or

```
d2r-query mapping.ttl @query.sparql
```

## 4. Reference
